PRESSEMITTEILUNG

EZB VERÖFFENTLICHT HANDBUCH ZUR PRÜFUNG DER AKTIVASQUALITÄT (AQR)

- Das Handbuch enthält die Methodik für zehn spezifische Arbeitseinheiten in Phase 2 (Prüfungen vor Ort) der AQR.
- Geprüft werden in zentralen Arbeitseinheiten u. a. die Prozesse, Verfahren und Rechnungslegung, die Kreditakten, der Sicherheitswert sowie die zum beizulegenden Zeitwert bewerteten Level-3-Aktiva (im Anhang sind alle zehn Arbeitseinheiten beschrieben).

Die Europäische Zentralbank (EZB) hat heute ihr Handbuch zur Methodik in Phase 2 der AQR veröffentlicht. Das Dokument soll den nationalen zuständigen Behörden (NCAs) und ihren externen Sachverständigen bei der Durchführung der AQR als Leitfaden dienen.

Phase 2 schließt sich an die Portfolioauswahl (Phase 1) an und läuft bis August 2014. Der Abschluss des AQR-Prozesses ist für Oktober 2014 vorgesehen. Dann werden die bei der AQR gewonnenen Erkenntnisse zusammen mit den Ergebnissen des gemeinsam mit der Europäischen Bankenaufsichtsbehörde (EBA) durchgeführten Stresstests veröffentlicht.

Im Handbuch sind u. a. Orientierungshilfen zu den folgenden Punkten enthalten:

- Verfahren zur **Datenvalidierung** und zur Prüfung von Modellparametern
- Vorgehensweise bei der Bewertung von **bedeutenden Exposures** sowie **Sicherheiten** und bei der Festlegung der **erforderlichen Höhe von Rückstellungen**
- Prozesse zur **Qualitätssicherung** und **Fortschrittskontrolle** zur Gewährleistung eines rechtzeitigen Abschlusses
- Hinzuziehen von unabhängigen, **externen Bewertungen** von Vermögenswerten in bestimmten Fällen
- Verwendung von einschlägigen Benchmarks zur **Bewertung von Marktwerten**

Die AQR ist eine zentrale Komponente der **umfassenden Bewertung**, deren Ziel es ist, die Transparenz der Bilanzen von bedeutenden Banken zu verbessern, gegebenenfalls Bilanzsanierungen anzustoßen und das Vertrauen der Anleger wiederherzustellen, bevor die EZB im November 2014 ihre Aufgaben im Bereich Aufsicht übernimmt.

Im Folgenden finden sich **einige wichtige Zahlen aus Phase 2** bezüglich der 128 Banken, die der umfassenden Bewertung unterliegen:

- Gesamtbetrag risikogewichteter Aktiva (RWA) der zur Prüfung ausgewählten Portfolios:
3,72 Billionen € dies entspricht **58 % der gesamten RWA** aller Banken
- Geschätzte durchschnittliche Anzahl der pro Bank geprüften **Kreditakten: 1 250**

Medienanfragen sind an Frau Uta Harnischfeger unter +49 69 1344 6321 zu richten.

Annex (nur auf Englisch verfügbar)

Annex – AQR execution phase

	Working block	Description
1	Processes, policies and accounting review	Bank processes, policies and accounting practices have a key impact on the carrying values of assets in banks' balance sheets and so must be reviewed. The review will cover the key topics that influence accounting balance sheet valuations. Such key topics include whether a bank correctly applies the fair value hierarchy, accounting classifications (e.g. available for sale), provisioning approach, treatment of non-performing exposures and forbearance.
2	Loan tape creation and data integrity validation	The credit analysis will be based on a "loan tape" provided by the bank. This loan tape includes account information such as segment classification, status, and credit performance data. The data must be of sufficient quality to perform the required analysis.
3	Sampling	The portfolios reviewed exceed 50% of risk weighted assets for all banks subject to the comprehensive assessment. Given the volume of analysis involved, it is not possible to review all exposures in the selected portfolio. Samples will therefore be taken, whereby specifics (such as loan classification and provisioning) of a particular credit (i.e. loans, advances, commitments or other off-balance sheet exposure) will be looked at in detail. The samples chosen must be both large and representative enough to allow for a robust analysis. The size of the sample will depend on the homogeneity of the portfolio, the risk of the portfolio, the total number of debtors and the level of debtor concentration.
4	Credit file review	National competent authority (NCA) bank teams will verify that credit exposures have been correctly classified (e.g. placed in the correct regulatory segment, non-performing loan status, impairment status) and that, if a specific provision is required, it has been set at an appropriate level. The credit file review work

		block will also be used to identify cases where a loss event trigger has not been hit, but a loss is more likely than not. For these cases, the expected future loss will be measured for incorporation into the stress test. The credit file reviews will cover all loans, advances, financial leases and other off-balance sheet items, including specialised asset finance such as shipping and project finance.
5	Collateral and real estate valuation	A key factor in determining the appropriate carrying amounts is the valuation of collateral or on-balance sheet real estate. Generally, the majority of collateral will be revalued for all debtors selected in the sampling that do not have a third-party valuation less than one year old. This will be carried out by NCA bank teams and will feed into other blocks of the exercise.
6	Projection of findings of the credit file review	Findings of the credit file review will then be projected to the wider portfolio, with the aim of assessing the adequacy of provisions. Projection of findings will be applied to homogeneous exposure pools (in line with audit guidelines).
7	Collective provision analysis	Smaller, homogeneous, impaired exposures are typically provisioned using a collective provisioning approach – that is, a point-in-time statistical model of incurred loss. Similarly, general provisions are usually set using collective models for the whole portfolio. In order to verify that provisioning levels are appropriate, it is critical to ensure that collective provisioning models are fully aligned with the letter and spirit of accounting rules (International Accounting Standards (IAS) 39 or national generally accepted accounting principles).
8	Level 3 fair value exposures review	For banks with material level 3 exposures, a thorough revaluation of the most important exposures will be carried out on a selective basis – i.e. not all banks will be analysed. For banks with material level 3 banking book exposure, a revaluation of the most important securities will be carried out. For the banks with the most important trading books, a qualitative review of trading book core processes (independent

		price verification, product approval, etc.) will be carried out, combined with a quantitative review of the most important derivative pricing models (measured by metrics such as level 3 gross mark-to-market) from a level 3 perspective. It is expected that, in most cases, fewer than ten derivative pricing models will be reviewed for each bank included in the trading book review, depending on the size of the bank's exposure to level 3 derivatives. Some banks included in the trading book review will have no relevant level 3 derivative pricing models to review.
9	Determine AQR-adjusted Core Equity Tier (CET) 1%	<p>Banks are only expected to change the 2013 certified accounts in the unlikely event that the AQR highlights issues that should lead to restatement according to local law, e.g. identification of accounting irregularities.</p> <p>Banks will be expected to reflect findings from the AQR in their accounts, where found necessary in the relevant accounting period in 2014 following the AQR. For example, banks may be expected to:</p> <ul style="list-style-type: none"> - correct specific provisions for individually impaired credit facilities that were sampled in the file review; - correct specific provisions for collectively impaired credit facilities, where the bank's collective provisioning model is considered as missing crucial aspects required in accounting rules (in this case, banks would be expected to correct internal models and policies); - create a credit valuation adjustment for derivatives. <p>Other findings from the AQR will not be included in 2014 accounts, as they do not explicitly comply with accounting rules (e.g. they do not relate to incurred losses). These include the extrapolation of findings from sampled files to the wider portfolio. Together with the stress test findings, such AQR findings will form the basis for supervisory measures requiring banks to cover potential capital shortfalls. In order to correctly account for all additional incurred losses identified within the previous work blocks, an "AQR-adjusted CET1 ratio" will be calculated for each bank. This AQR-adjusted CET1 ratio (which is calculated according to the single rule book of 1 January 2014) will be used to compute the final stress test outcomes.</p>

		Banks will neither be required to restate accounts nor to apply the AQR assumptions on an ongoing basis. The AQR-adjusted CET1% is not a de-facto alternative accounting standard.
10	Quality assurance	The NCA bank teams are responsible for all results delivered to the ECB and should apply a four-eyes principle to ensure the quality of the exercise at the national level. This quality assurance at the national level will not be led by the ECB, which will focus on ensuring cross-system consistency and a level playing field across systems on completion of the comprehensive assessment.
